

New Project Setting for Future Order Release

The "FutureOrders_ShipmentRelease_LeadTime" setting is now available in Order Related Project Settings. When activated, this optional setting is used in calculating a future release date for orders based on the WMS preparation time needed for the shipment. The value for this setting is defined in business days. The setting is not necessary if the WMS does not require lead time.

Refer to [Support for Future Delivery Window](#) and [OpenTools Message Enhancements](#) for related information.

Enhancements	
1.	The "FutureOrders_ShipmentRelease_LeadTime" setting is now available in System Admin>EDGE Setup>Project Settings>Order Related .

Business Benefit

When a value is provided, the new project setting enables EDGE to automatically take lead time for the WMS into consideration when calculating an order's future release date.
