

# Backorder Release Schedule Page Enhancements

The **Backorder Release Schedule** page has been redesigned and is now implemented using “JP-Grid” column manipulation and pagination features. These features provide considerable flexibility in filtering the data and in arranging, showing/hiding and sorting columns and otherwise controlling the display of the list.

The list page includes the following columns, each with the specified type of filter:

- **Order#** ([Number filter](#))
- **External Reference** ([Text filter](#))
- **Order Date** ([Date filter](#))
- **Order Status** ([Set filter](#) – “Backordered” and “Reserved” only)
- **Total** (Number filter)
- **Priority** (Set filter)
- **Ship Complete** ([Boolean filter](#))
- **Release Date** (Date filter)
- **Bill To** (Text filter)
- **Source** (Set filter)
- **Order Source** (Set filter)
- **Billing Code** (Set filter)
- **Member Type** (Set filter)

In addition to the standard JP-Grid table functions, the fields in the following columns are now editable, both on an individual basis and in bulk:

- **Priority** (available options for change: *Low, Medium, High, Rush*)
- **Ship Complete** (available options for change: *Yes, No*)
- **Release Date** (original values are based on the release date on the Order Header; modifications restricted to current or future dates)

Refer to [New Service Function for Backorder Release Schedule](#) for important information regarding user access to the list page and its described features.

Enhancements	
1.	The described page enhancements have been implemented on the <b>Orders&gt;Release Management&gt;Backorder Release Schedule</b> page.

## Business Benefit

The enhancements to the **Backorder Release Schedule** page design help to improve usability and page performance.

FYI . . .

- A JP-Grid “Number” filter provides an input field for a full or partial character search using numeric and a limited set of special characters.
- A JP-Grid “Text” filter provides an input field for a full or partial character search using alphanumeric and a limited set of special characters.
- A JP-Grid “Date” filter provides date selection via drop-down calendars for which selectable criteria can be applied.
- A JP-Grid “Set” filter provides a selectable list of predefined values.
- A JP-Grid “Boolean” filter provides “Yes” and “No” radio buttons that you can select or deselect to search for list items containing either or both options.
