

Resolved Issues | 16.24.0

This section lists the issues resolved and patches made to the EDGE platform in this release.

Issue #	Issue Description
EDGE61-9082	The issue where EDGE/CMS-powered websites were found to be vulnerable to HTTP proxy injection has been resolved.
EDGE61-9612	The problem that caused the wrong number of records to be displayed in the Providers list when filtering on Records Per Page has been fixed.
EDGE61-8268	The problem that caused the error message "Server is currently unavailable or down for maintenance" to be issued when attempt made to download Excel output for Reports>Orders>Warehouse report has been fixed.
EDGE61-9779	The issue where the Stock Activity report in CSV format from the WMS shows the Quantity as a decimal value has been resolved.
EDGE61-9823	The problem where SKUs were not available for selection when needed to be added to a work order because the code was looking for an incorrect inventoryID has been fixed.
EDGE61-9844	The issue where saved orders were redirected to the Order Header page when Provider Optimization was set to "No" in the manual order portal has been resolved.
EDGE61-9571	The problem that caused orders to fail with error "...Provider in message does not match providers in Order" when a SKU was released to a new provider has been fixed.
EDGE61-9940	The issue where Add to Cart was not being triggered by clicking on product name from the wish list section in an EDGE/CMS-powered website has been resolved.
EDGE61-10071	The problem that caused all communication events from multiple projects to be displayed under a single merchant has been fixed.
EDGE61-10113	The problem that kept inventory associations from being updated when multiple Catalog Imports were included in a single file when MTM setting "REMOVE CATALOG-INVENTORY ASSOCIATIONS " was set to "Yes" has been fixed.
