

# EDGE Payments and Payment Services

---

## **Introduction**

This guide describes the procedures and settings needed to configure EDGE for a variety of order payment types and for the credit and gift card payment service providers/authorizers supported in the Jagged Peak eCommerce platform.

## **Payments and Payment Services Providers/Authorizers**

The ability to accept and process valid forms of payment is critical to any order management system. A merchant must be able to provide a variety of options to meet its customers' initial payment needs as well as their return order requirements. EDGE provides configuration parameters that you can use to define and manage each supported payment type and its associated alternatives and refund policies.

Credit cards and gift cards are two of the most common forms of online payment and authorization for those payment is required for both cardholders and card merchant accounts. To support those payment types, EDGE also provides a comprehensive set of configuration parameters you can use to define and manage each supported payment services provider/authorizer for credit cards and gift cards.
