

# Updated Orders List Report Output | EDGE 16.35.0

---

The CSV output that can be exported from the new **Orders List** report (implemented in EDGE 16.18.0) has been updated to include all columns previously provided in the output from the original, "legacy" version of the Orders List report.

The added columns include data for dynamic fields and order currency and can be generated from a filtered or unfiltered **Orders List** report.

Enhancements	
1.	Columns for dynamic fields and currency data are now included in the CSV output from the new, default version of the <b>Reports&gt;Orders&gt;Orders List</b> report.

### Business Benefit

The availability of dynamic field and currency data in the new Orders List report provides clients with the complete set of data expected by those who previously used the legacy version of the report.
