

Configure Tax Rates

Several third-party providers supply EDGE with comprehensive tax rate services. Through its support for these services, EDGE can calculate sales tax in real time based on the delivery zip code for US city, state and county taxes, on the Canadian postal code for GST, PST and HST taxes, as well as on many other international codes.

EDGE also gives merchants the ability to create and maintain their own tax rate table, which can be used to override the current tax rates for any of the third party tax rate services.

Follow the procedures below in the order listed to complete the configuration for tax rates.

Procedures:
